

VADALA PAVAN KUMAR

Senior DevOps Engineer / Backend Developer Visakhapatnam,
India |

iampavan.blue@gmail.com Cell No: +91 – 93931 41433

Career Objective: To contribute effectively to organizational success by leveraging my expertise as a DevOps Engineer and Backend Developer, while continuously enhancing my professional growth by building scalable, secure, and high-performance systems.

Professional Summary

DevOps Engineer and Backend Developer with **5+ years of experience** owning end-to-end **CI/CD pipelines, hybrid cloud infrastructure (On-Prem + AWS), and production reliability**. Strong expertise in **automation using Bash, Python, and Ansible**, with hands-on experience in AWS services and **SRE-aligned operational ownership**.

Proven ability to **design, deploy, monitor, and support backend systems and APIs**, manage **secure production releases**, handle **incident response, rollbacks, and access control**, and work across **multiple technologies and environments** as a single owner. Adept at translating business requirements into reliable production systems while ensuring operational stability through DevOps best practices.

TECHNICAL SKILLS

CORE SKILLS

DevOps & SRE

- CI/CD Pipeline Design & Ownership
- Production Release Management & Rollbacks
- Incident Response & Root Cause Analysis (RCA)
- High Availability & Reliability Engineering
- Environment Management (DEV / QA / UAT / PROD)

Cloud & Infrastructure

- AWS: EC2, VPC, IAM, S3, RDS, ALB/ELB, ECR, Route 53, CloudWatch
- Hybrid Infrastructure (On-Prem + AWS)
- Infrastructure Provisioning & Cost Optimization

CI/CD & Build Tools

- Jenkins
- GitHub Actions
- GitLab CI/CD
- Bitbucket Pipelines
- Maven, Gradle
- NPM, Yarn, PNPM
- Python: pip, Poetry, pipenv, Conda
- Dart / Flutter: pub
- PHP: Composer
- Linux Package Managers: APT, YUM, DNF

Automation & Configuration

- Bash, Python
- Ansible
- Cron Jobs & Scheduled Automation
- Containers & Orchestration
- Docker
- Kubernetes (Basic–Intermediate)

Monitoring & Observability

- AWS CloudWatch
- Prometheus
- Grafana
- Application & Log Monitoring (PM2, system logs)

Security & Governance

- SSH Key-Based Access
- Role-Based Access Control (RBAC)
- Branch Protection & Approval Workflows
- SSL/TLS, DNS, Reverse Proxy

Configuration

- Backend & Databases
- Node.js, Python
- REST API Support & Integrations
- MySQL, PostgreSQL, MongoDB
- Servers & OS
- Linux (Ubuntu, RHEL, CentOS)
- Nginx, Apache, Tomcat, Caddy

AI-ASSISTED ENGINEERING & DEVELOPER PRODUCTIVITY TOOLS

- **ChatGPT (Codex models)** – Used for root cause analysis, debugging CI/CD failures, validating shell scripts, analyzing API errors, and improving deployment logic.
- **GitHub Copilot** – Assisted in writing and reviewing infrastructure scripts, backend code, CI/CD pipelines, and reducing boilerplate while maintaining coding standards.
- **AWS CodeGuru** – Used for automated code reviews, identifying security vulnerabilities, and receiving performance optimization recommendations on AWS workloads.
- **Perplexity AI** – Used for rapid technical research, cloud architecture clarification, error interpretation, and cross-verifying solutions with official documentation.
- **Claude AI** – Used for long log analysis, stack trace interpretation, and validating complex system behavior explanations.
- **Google Gemini** – Used for comparative troubleshooting, architecture suggestions, and alternative solution validation.
- Applied AI tools responsibly to understand errors, validate fixes, prevent recurrence, and improve operational quality — not as a replacement for engineering judgment.

WORK EXPERIENCE

VARUN GROUP

- **DevOps Engineer / Backend Engineer**
- **Project:** Varun Management System (VMS)

• Jan 2025 – Present

- Designed, implemented, and owned CI/CD pipelines from scratch supporting DEV, QA, UAT, and PROD environments.
- Implemented release governance with branch protection, tagging, approval workflows, and rollback strategies.
- Built and operated hybrid infrastructure (On-Prem + AWS) ensuring availability, scalability, and secure access.
- Automated deployments, server provisioning, backups, monitoring, and housekeeping using Bash, Python, and Ansible.
- Implemented cron-based automation for daily health checks, PostgreSQL/MySQL backups, cleanup tasks, and automated email notifications.
- Led production incident response, log analysis, service restarts, stabilization, and Git-based rollbacks.
- Implemented AWS monitoring using CloudWatch and actively deploying Prometheus and Grafana for observability and alerting.
- Supported backend systems using Node.js and Python, handling API fixes, routes, controllers, and third-party integrations.
- Developed and supported HRMS backend APIs, tested using Postman and validated workflows using n8n.
- Deployed and managed applications built with Node.js, React, Flutter, Dart, PHP, Java, and Python.
- Configured multiple web applications on single servers with isolated environments.
- Integrated SonarQube for code quality analysis and Nexus for artifact repository management.
- Implemented RBAC, secure authentication, and controlled production access.
- Optimized AWS usage and tagging to reduce infrastructure cost.
- Used AI-assisted analysis to investigate CI/CD failures, production issues, and error patterns, reducing MTTR and preventing repeat incidents.

Key Impact

- Reduced deployment time through CI/CD automation
- Improved production reliability and release stability
- Reduced manual operational effort via automation
- Improved visibility and communication through alerts

VARUN MOTORS PVT. LTD. – Visakhapatnam (Siripuram)

DevOps Engineer / Site Reliability Engineer (SRE)

Jan 2024 – Present

- Led DevOps and SRE initiatives for enterprise on-prem infrastructure.
- Designed and deployed:
 - Single-server architectures
 - Dual-server high-availability setups
 - Multiple environments on a single server (DEV / QA / UAT / PROD)
- Configured Nginx and Apache with SSL/TLS, DNS, and reverse proxy setups.
- Implemented incident response, RCA, monitoring, and reliability improvements.
- Automated workflows and integrations using n8n.
- Ensured security hardening, access control, and operational excellence.

AMUNIK SOFTWARE SOLUTIONS PVT. LTD. – Vijayawada

DevOps Engineer

Jan 2022 – Dec 2024

- Delivered end-to-end DevOps automation for live AWS production systems (JPF Project, VR Garage).
- Provisioned and managed AWS EC2, ALB, Auto Scaling, S3, IAM, Route 53.
- Built and maintained Jenkins CI/CD pipelines for continuous integration and deployment.
- Supported Docker-based deployments for environment standardization.
- Implemented monitoring and alerting using CloudWatch, Prometheus, and Grafana.
- Ensured high availability, scalability, and security best practices.
- Collaborated with development, QA, and operations teams to streamline releases.

PIVOTAL SOFTWARE SOLUTIONS PVT. LTD. – Visakhapatnam

Intern – DevOps Engineer

Jan 2021 – Dec 2021

- Worked on AWS infrastructure including EC2, VPC, IAM, and Linux servers.
- Designed and supported Jenkins CI/CD pipelines.
- Assisted with application deployments and environment configuration.
- Supported Git workflows and DevOps best practices.

TOOLS & TECHNOLOGIES

AWS, Jenkins, GitHub Actions, GitLab CI/CD, Bitbucket, Docker, Kubernetes, Ansible, Bash, Python, Node.js, React, Flutter, PHP, Java, MySQL, PostgreSQL, MongoDB, Prometheus, Grafana, CloudWatch, Nexus, SonarQube, JIRA, Postman, Linux.

EDUCATION & CERTIFICATIONS

- MCA – Vignan's University, Guntur
- AWS Certified Developer – Associate
- DevOps Hands-On Training

DECLARATION

I hereby declare that the information furnished above is true and correct to the best of my knowledge.

Place: Visakhapatnam
